Notes

These notes are drawn from Alexander and Sadiku, 2013, O'Malley, 2011, and other sources. They are intended to offer a summary of topics to guide you in focused studies. You should augment this handout with notes taken in class, reading textbook(s), and working additional example problems.

Remember, models are mathematical conveniences.

### "All models are wrong, but some are useful". - George Box

- And, hopefully close enough to be useful most of the time.

Our first *passive* element:

**Definition:** Resistor: An element that restricts (or resists) electrical flow. (Water model)

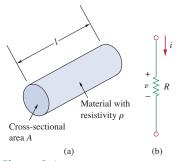

Figure 2.1

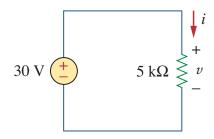

(a) Resistor, (b) Circuit symbol for resistance

$$R = \rho \frac{l}{A}$$

**Voltage-Current Relationship:** Resistor: With passive sign convention – "current flows in the direction of a voltage drop."

$$v(t) = i(t) \cdot R$$

and its algebraic equivalents, i(t) = v(t)/R and R = v(t)/i(t), where R is specified in Ohms ( $\Omega$ ). This simple (linear) model is referred to as *Ohm's law*. (Later, we will use the generalization,  $V(s) = I(s) \cdot Z(s)$  where Z(s) represents *impedance* which includes capacitors and inductors (and resistance as a special case). Now, a circuit or two:

**Figure 2.8** For Example 2.2.

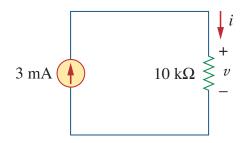

Figure 2.9
For Practice Prob. 2.2

**Power Absorbed:** Resistor: Using  $p(t) = v(t) \cdot i(t)$  and the voltage-current relationship for a resistor, we have

$$p(t) = v(t) \cdot i(t)$$

$$= i(t) \cdot R \cdot i(t) = i(t)^{2} \cdot R$$

$$= v(t) \cdot \frac{v(t)}{R} = \frac{v(t)^{2}}{R}$$

Note: Resistors always absorb power, so that  $p(t) = v(t) \cdot i(t)$  for a resistor is always positive!

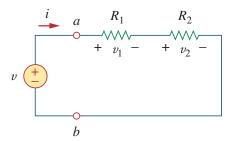

Transformers in the power grid: Why? (How about the wires?)

But then someone must do this work

13. The formulas for a wye-to-delta transformation are

$$R_a = \frac{R_1 R_2 + R_2 R_3 + R_3 R_1}{R_1}, \qquad R_b = \frac{R_1 R_2 + R_2 R_3 + R_3 R_1}{R_2}$$
$$R_c = \frac{R_1 R_2 + R_2 R_3 + R_3 R_1}{R_3}$$

14. The basic laws covered in this chapter can be applied to the problems of electrical lighting and design of dc meters.
